Honda Vezel

HIGHLIGHTS

Space and Comfort

We all need space, whether it's fitting five people comfortably or having a spot to place your beverage. From sports gear to a corresponding collection of shoes, there's never enough room for it all. The Honda Vezel challenges that convention with a spacious cabin and 60/40 ULTRA seats that give you the flexibility of space without compromising your comfort.

New Redesigned Grille

A more upright grille comes together to add a touch of class.

LED Headlights

The contemporary design of the LED Daytime Running Lights, Headlights and Taillights are both striking and stylishly simple.

Chrome Door Handles

Put the classy chrome door handles and conveniently enter your ride with a smart keyless entry system.

Hidden Rear Door Handles

The rear door handles are discreetly hidden to deliver the looks of a 2-door coupé.

Electric Door Mirrors

The electrically adjustable mirrors come mounted with the side indicator assembly.

Stop Bright

The taillights feature LED brake lights that use less energy and help increase your visibility to other drivers.

Upgraded Front Seats

The Honda Vezel interior was designed to accommodate. From five passengers to copious amount of cargo space, the inside of the Honda Vezel is truly outstanding. The new upgraded front seats are designed for more comfort and sporty feels.

Comfort For Your Passengers

Keeping your passengers comfortable with wider rear leg rooms.

Cargo Formations

When you decided to keep the seatbacks up, fold them down, flip up the cushions or try some combinations, the Honda Vezel offers cargo combinations for just about anything.

Push and Go

Leave your car key in your pocket. All the power to start your engine is at your fingertips with Push Button Start.

Brake Button

Engaging the parking brake with just one finger. The Honda Vezel features Electric Parking Brake that activates with a simple push of a button.

Multi-Information Display

All the information you need in one screen.

Cruise Control

Accurately maintain a speed set by the driver without any outside intervention by controlling the throttle-accelerator pedal linkage.
